Procedure

Prepare B. Mix the constituents of A, then add B. Adjust the pH and the viscosity.

Comments

ORAMIX NS 10	A natural surfactant which is not ethoxylated, non ionic and foaming. It promotes the viscosity potential and stabilises the foam, making it finer.
AMONYL 675 SB	A sulfobetaine which produces a high level of viscosity when combined with NaLES + amide + salt. It also has good antistatic properties.
MONTANE 20	A sorbitan laurate which makes the foam softer to the touch.
ORAMIDE DL 200 AF	A thickening agent which is a coprah amide with a low level of free amines.
