### Procedure

Melt A at 70-75°C. Heat B to the same temperature. Emulsify A into B then introduce C. At approximately 40°C introduce the constituents of D.

### Comments

**MONTANOV 14** A glucolipid emulsifier of vegetable origin which is an excellent coemulsifier and texture agent. It gives a formula consistency whilst preserving a light feel. It has a fresh feel when applied.

**SIMULSOL 165** A self emulsifying base which when combined with MONTANOV 14 gives a light feel likely to be suitable for all types of skin.

**SIMULGEL 600** An emulsifying and thickening agent in a liquid, very easy-to-handle form. It requires neither premixing nor neutralisation.

**SEPICALM VG** A lipoaminated, soothing active ingredient which is rich in Lily Flower extract and specially adapted to sensitive skins.  
The combination of the SIMULSOL 165/ MONTANOV 14 emulsifying system and this active ingredient is perfectly suited to greasy skins which are often subjected to aggressive treatment.

**SEPICIDE HB /CI** Preservative system
