Procedure

Melt ingredients in A at 75°C. Disperse the silicate then the xanthan gum into the water. Heat the water phase to 75°C and add PECOSIL. Introduce A in C then start homogenizer. Introduce ingredients in B and continue homogenization step for few minutes. Allow to cool under moderate stir and at 40°C introduce ingredients in D. Adjust final pH if necessary.

Comments

SIMULSOL 165	Self emulsifying base.
MONTANOV S	Glucolipid emulsifier in harmony with nature. The combination of SIMULSOL 165 / MONTANOV S makes it possible to guarantee the preservation of a smooth texture over time. This combination facilitates the formulation of suncare products that are stable in terms of texture, dispersion of sunscreens, protection factor, etc.
PECOSIL PS100	A coemulsifier with high dispersing power. Ideal for suncare formulas.
SEPigel 305	Thickening and emulsifying agent in liquid form. Very easy to use (no predispersion or neutralization). Provides a soft, non-sticky feel.
SEPICIDE HB	Preservatives.

Characteristics

Appearance	white emulsion.
pH	Environ 6.5
Viscosity	approx 100.000 mPa.s BROOKFIELD LV4 6rpm
Stability	Stable at RT/40°C/ 50°C and after freeze-thaw cycles -5 / +40°C (M1) Stable when centrifuged 3000rpm 20' 50°C

Assessment

SPF - in vitro (measured after 1 month) : 37 ± 6
SPF - in vitro (measured after 3 monthes) : 37 ± 7
SPF - in vitro (measured after 6 monthes) : 35 ± 5
