**Procedure**  
**4 kg - TRIMIX**

Heat phase A to 90°C. Separately melt ingredients of phase B to 90°C and then add phase C to phase B. When B+C is homogeneous, add it to phase A and emulsify with rotor stator for 7'. Cool down to 60°C and then add phase D. Homogenize with rotor stator for 3'. Cool down to 50°C and add phase E. Pack while the formula is still warm.

# Raw materials from SEPPIC

**MONTANOV™ 202**

**Arachidyl Alcohol and Behenyl Alcohol and Arachidyl Glucoside**  
Glucolipid emulsifier derived from vegetable origin. Promoter of liquid crystals, it plays a role in maintaining skin moisturization over time. Thanks to liquid crystals which contain water, MONTANOV™ 202 helps to keep skin moisturized. Ecocert and Natrue approved.

**LANOL™ 2681**
**Coco-Caprylate/ Caprate**

Emollient agent from vegetable origin. Ecocert approved.

**LANOL™ P**
**Glycol Palmitate**

Texturing agent which improves the consistency of the formula and brings soft skin feel, without any soaping effect.

**TIMECODE™**
**Palmitoyl Glycine**

The best ally against inflamm'aging, it targets the aging key markers. Lifted and firmed up, the skin reveal a new radiance! The TIMECODE™ anti-wrinkles activity is higher to the one of the market anti-aging reference (in vivo: 78% of the volunteers are satisfied). Characterization of the inflamm'aging and its relation to the InterLeukin-6. SEPPIC's answer: TIMECODE™ (Palmitoyl Glycine)

**SEPIMAT™ HB V**
**Methyl Methacrylate Crosspolymer**

Ultra-soft hollow and ultra light microspheres that impart a “powdery” effect at low use levels. This versatile, both hydro and lipo dispersible, powder allows formulators to make very powdery formulations containing low levels of oily materials. In O/W, W/O or W/SI emulsions, only 0.5% of Sepimat™ HBV is enough to avoid overly greasy formulations and provide a powdery feel.

**SEPIMAT™ SB**
**Methyl Methacrylate Crosspolymer**

SEPIMAT™ SB, consisting of absorbent, soft microspheres is ideal for a soft and matte skin appearance. This versatile and easy-to-disperse powder is suitable for all types of formulations and is especially adapted for fluid or sprayable formulations due to its fine granulometry.

**SEPIMAX™ ZEN**
**Polyacrylate Crosspolymer-6**

Powder polymer with a MAXIMUM resistance to electrolytes thanks to its high associative behavior. Stable from pH 2 to 8, it enables the creation of formulas with a specific skin feeling: rich, velvety and elegant. It is now possible to formulate transparent aqueous gels, cream-gels and emulsions with any kind of active ingredients and to achieve ZEN.

**SESAFLASH™**
**Glycerin and Acrylates Copolymer and VP / Polycarbamyl Polyglycol Ester and Hydrolyzed Sesame Protein PG-Propyl Methylsilanediol**

An original, patented molecular combination containing sesame to instantly and visibly smooth the skin. Rejuvenation, firmness and comfort guaranteed! (in-vivo proven efficacy).
